## Grasses - 'Juncus'

Juncus Inflexus, commonly referred to as Blue Arrow, Weeping Blue Rush, or Hard Rush tolerates drought to wet conditions and has a strong upright habit.

Juncus Tenuissima, commonly referred to as Blue Dart or Blue Dart Rush tolerates drought to wet conditions and has an upright habit, but not as strong as Blue Arrow.

Juncus Effusus Spiralis, commonly referred to as Twisters or Corkscrew Rush prefers wet conditions and has small curling leaves with a mostly upright growth pattern.

The Juncus are widely used in containers, landscaping mixed with colorful bedding plants, or along waterside. The mostly upright growth patterns bring visual interest and rich green color wherever they are added. This is a perennial that maintains its color in warmer climates. In colder climates, the foliage will whither in Fall and Winter months. In colder climates, the brown foliage will need to be cleared away in the early Spring to allow for the growth of new foliage.

### Plant it Here!

- Borders
- Waterside
- Landscape
- Containers
- Anywhere you want an interesting spray of green

### Extra! Extra!

- Unique beauty for Spring, Summer and Fall landscape
- Beautiful green foliage to frame beds and containers
  - May also be placed waterside for accent
- Heat and light tolerant
- Division should be done in early Spring months

"What you need to know  
To grow plants  
You're proud to show"
