## Portulaca - 'Sundial'

Portulaca Sundial's heat loving and drought resistant characteristics make it a superb plant for late Spring and Summer weather. Sundial mix features a bright combination of fuchsia, magenta, scarlet, tangerine, gold and cream. Other individual colors consist of fuchsia, scarlet and yellow.

Portulaca Sundial blooms repeatedly all summer long. It has average watering needs so simply water regularly. It is drought resistant, so if you forget to water occasionally...don't worry. On the contrary, do not over water your Portulaca! You should deadhead spent plants just to make sure your Portulaca continue to produce great blooms. Portulaca does not require fertilizer, and too much of it will result in more foliage and fewer blooms. The Sundial series sets blooms 10-14 days earlier than most varieties. This annual is an excellent performer that requires very low maintenance.

### Plant it Here!
