## TABASCO PEPPER

This super hot pepper gave Tabasco sauce its name. The Tabasco pepper averages about 2" in height, is very hot, medium-sized, and oblong. It can be consumed at any stage of growth.

The Tabasco plant has a typical bushy growth and unlike other pepper plants, the pepper grows up rather than hanging down from its stems. Don't overdo it when cooking with Tabasco peppers; they pack a spicy bite, so a little goes a long way!

### Plant it Here!

Mass Planting  
Gardens  
Containers

### Serve it up

Raw  
Baked  
Fried  
Sautéed  
Grilled  
Stewed  
Steamed

### Harvest Instructions

Harvest when they are 2 inches long and the color starts to change from green to red. The color of the pepper determines how hot it will be.

You should also avoid touching your eyes or mouth when harvesting

### Health Benefits

Contains Vitamins A & C  
Contains Vitamin B6  
Contains Iron & Potassium
