Grasses—'Melinis'

Melinis Savannah is an ornamental grass. It is widely used in beds and in landscaping mixed with colorful bedding plants. Melinis grows best in warmer climates, where they may be a perennial. In colder climates, the colors will fade in Fall and Winter months but still maintain their beauty until the first heavy snow. Melinis grows compact, up to 36-42" tall when it matures. The grassy leaves grow in a thick clump. The blue-green, spiky foliage is soft to the touch. In mid-Spring, the grass puts on deep rose plumes that are approximately 3-4 inches. As the plant matures, the blooms fade from deep rose through shades of pink, finally arriving at a pale cream color. In the midst of the summer when plant is in full bloom, all shades will be present. They are beautiful anywhere in your landscape and in fresh and dried floral arrangements as well. Wherever you choose to plant, this grass is easy to please. It tolerates up to drought conditions as well as prospering in partial sun. Savannah prefers to be in full sun and well-drained soil.

Plant it Here!

- Borders
- Landscape
- Containers
- Anywhere you want a bright splash of color

Extra! Extra!

- Perfect for Spring, Summer and Fall landscape
- Bold color to frame beds and walkways
- Warm climate perennial
- Heat and light tolerant
- Keep moist, but it likes well drained soil best!
