## CANTALOUPE

Cantaloupe will produce a 2 pound orange flesh fruit with raised rind netting over yellow skin. They give off a musky aroma, giving them the name of "muskmelon".

This tender annual will quickly be affected by frost, so if a frosty forecast is predicted, cover it up in order to save your plant.

### Harvest Instructions

About a week before a melon is ripe minimize water, too much water dilutes the sugar and sweetness of the fruit.

Harvest when fruit changes from gray-green to yellow.

A small crack circles the stem and the fruit can be removed with little or no pulling.

### Plant it Here!

Climbing/Trellis  
 Mass Planting  
 Gardens

### Serve it up

Raw  
 Frozen

### Health Benefits

Packed with Vitamins A & C  
 Source of Potassium  
 Contains Beta-Carotene

A fresh and healthy  
 way to  
 better living™
